

Forever Active HA

Description and Purpose

Forever Active HA provides a unique form of low molecular weight hyaluronic acid, with moisturising and lubricating properties, plus ginger oil and turmeric - making it one of the most powerful nutritional joint and skin moisturising supplements on the market.

Hyaluronic acid (HA) is a special protein that our bodies produce to lubricate and cushion our joints and muscles, as well as to ensure adequate skin hydration. As we age, our bodies produce less HA. With reduced HA, our joints can lose their natural lubrication, and our skin appears rough and dry.

Until recently, HA had to be injected because the digestive system could not absorb it in its natural state. Due to a new and unique process, HA can now be consumed orally. For centuries, Chinese herbalists have used ginger and turmeric to help promote healthy joint function.

With low molecular weight HA, together with the power of ginger oil and turmeric, Forever Active HA is your key to becoming a well-oiled machine again.

At a glance...

- Helps lubricates joints and moisturises skin
- Unique form of low molecular weight hyaluronic acid
- Contains beneficial ginger and turmeric roots for healthy joints
